BODY CONTOURING

Red light therapy is a non-invasive technology that enhances healthy cell life and generation. Contour Light gives targeted results without incisions, anesthesia or recovery time. Countour Light is backed by the science of using LED light technology.

Our flexible pad based system provides a safer, healthier and more enjoyable experience for patients, when compared to other body sculpting machines on the market today. It can be used on most parts of the body, head to the toes, though the eyes should be protected from its ultra bright lights. Goggles are recommended.

RED LIGHT THERAPY FOR BODY CONTOURING

- Body Slimming (cellulite reduction and topical contouring)
- Fat hoarding around abdomen and waist
- Fatty buttocks
- Leg obesity and cellulite deposit
- Fatty arms with skin laxity

READY TO GET RID OF THAT STUBBORN BELLY FAT?

Belly fat is stubborn and is typically one of the most challenging areas of our bodies to target for fat loss. It appears in many different ways and can be traced back to a variety of causes for both men and women. Some of the more common contributors to belly fat could be related to genetics, exercise, diet, stress, hormones, or several other standard functions of our everyday lives.

Belly fat reduction often requires strict diets, long hours at the gym, a surgical procedure, or other invasive techniques. Alternatively, Contours provides an immediate, non-invasive, and pain-free method of fat loss utilizing FDA-Cleared red light therapy that stimulates your body's natural fat-burning process called Lipolysis and makes quick work of making your belly fat disappear.
